

Advanced JavaScript (Before React)

1. ES6+ Revision

- let and const
- Arrow Functions
- Template Literals
- Destructuring (Arrays and Objects)
- Spread and Rest Operators

2. Important Array Methods

- map() – Transforming arrays
- filter() – Filtering data
- reduce() – Reducing to a single value
- find() – Finding specific items
- forEach() – Iterating through arrays

3. Asynchronous JavaScript

- Callbacks
- Promises
- Async/Await
- fetch() API
- Error Handling with try/catch

Mini Project Recommendation

Weather Application using a public API. This project helps students practice API calls, asynchronous JavaScript, and dynamic DOM updates.
